### About Conference

Conference series LLC Conferences invites all the participants from all over the world to attend 13<sup>th</sup> International Conference on Clinical Chemistry, during November 05-06, 2021 in Rome, Italy which includes prompt keynote presentations, Oral talks, Poster presentations and Exhibitions.

In view of this theme, the conference series aims to provide a forum for foreign researchers from various fields of chemistry, pharmacy, clinical chemistry, and laboratory medicine to share cutting-edge research findings and results on all aspects of Clinical Chemistry. The discipline began in the late 1800s with the use of basic chemical tests for different blood and urine components. Other methods, such as the use and measurement of enzyme activities, spectrophotometry, electrophoresis, and immunoassay, were used after that. Clinical trials Chemistry is a global discussion and learning forum for fundamentals, clinical pathology, developments in clinical chemistry, laboratory medicine, urine analysis, blood serum examination, chemistry equipment, and other topics. In terms of medicinal chemistry, future developments in laboratory medicine, manufacturing firms, and pharmaceutical companies It entails the investigation of associate degree organism pathology. organ system, or systemic fitness, as well as immunity and immune response. Laboratory medicine is a branch of medicine in which samples of tissue, fluid, or other matter are analysed outside of the body, usually in a laboratory.

### Why to Join?

The Clinical chemistry conference aim is to provide an international forum for participants to share their expertise and research findings in these fields. It will include a variety of tracks and sub-tracks within the field of Clinical chemistry allowing participants to choose the tracks that best fit their interests. The conference will include an opportunity to discuss the subject with highly qualified experts, scientists, physicians, professors, and other professionals and organisations interested in the field. It will be an excellent opportunity for young researchers to learn about and explore their respective fields of Clinical Chemistry.
